

Story 2	The Curator's Discipline
Story Title	The Curator's Discipline
Meta Goal	To instill the habit of systematically collecting and summarizing trusted sources <i>before</i> asking the AI for complex analysis, shifting the AI's role from a general knowledge engine to a private data analyst.
Target Audience	Professionals who are drowning in documents, reports, and articles and need a system to manage them.
Time	7 minutes (Storytelling: 3 min, Source Register demo: 4 min)
Context	AI Literacy, Level 2
Version	/
Starting Competence	Conscious Incompetence (Knows AI output needs checking but uses ad-hoc, untracked sources).
Ending Competence	Conscious Competence (Understands and can execute the disciplined process of building a curated "Source Register" to ground AI analysis in a trusted context).
Story Objective	Learners adopt the "Source Register" as a practical tool and see their primary role as a "librarian" for their AI.
Essential Question	Does the truth come from the AI's answer, or from the quality of the library you've built for it?
Anchor Question	"If your AI is an analyst, what books have you given it to read? Can you trust its analysis if it's only read random things from the internet?"
Story Arc	Setup: We know we need to verify AI claims (L1). But checking random sources for every query is exhausting. Tension: I have a folder of 100 PDFs, I <i>know</i> the answer is in there, but I can't find it. This is chaos. Disruption: The "Source Register" is introduced—a simple, disciplined way to create order. You're not just a user; you're a curator building a private library. Insight: I can use the AI's speed to summarize trusted documents <i>for my library</i> , and then use it again to analyze <i>only that library</i> . I control the ground truth.
Teaching Tools	Slide visuals ("Pile of PDFs" vs. "Ordered Source Register" table), Live demo creating a register entry for one document.
Teaching Situation	Full group lecture, followed by a small group exercise.

Story 2 The Curator's Discipline

Tension & Friction	Highlighting the “boring” discipline required. The value isn’t in a clever prompt, but in the systematic, non-glamorous work of building the library one source at a time. The friction is choosing what’s important enough to add.
Exercise	“You’ve seen the chaos and the order. Now, let’s practice the discipline. Here are
Hook	three reports on the same topic. Your group’s task is to create a source register and use an ‘analyst’ prompt to find the key disagreement between them.”
Teaching Core	Learners experience the shift from asking a generic question to asking a specific question grounded in a few documents. They feel the power and control that comes from limiting the AI’s “world” to a set of facts they have personally approved. They also encounter the new risk: bias in their own source selection.
